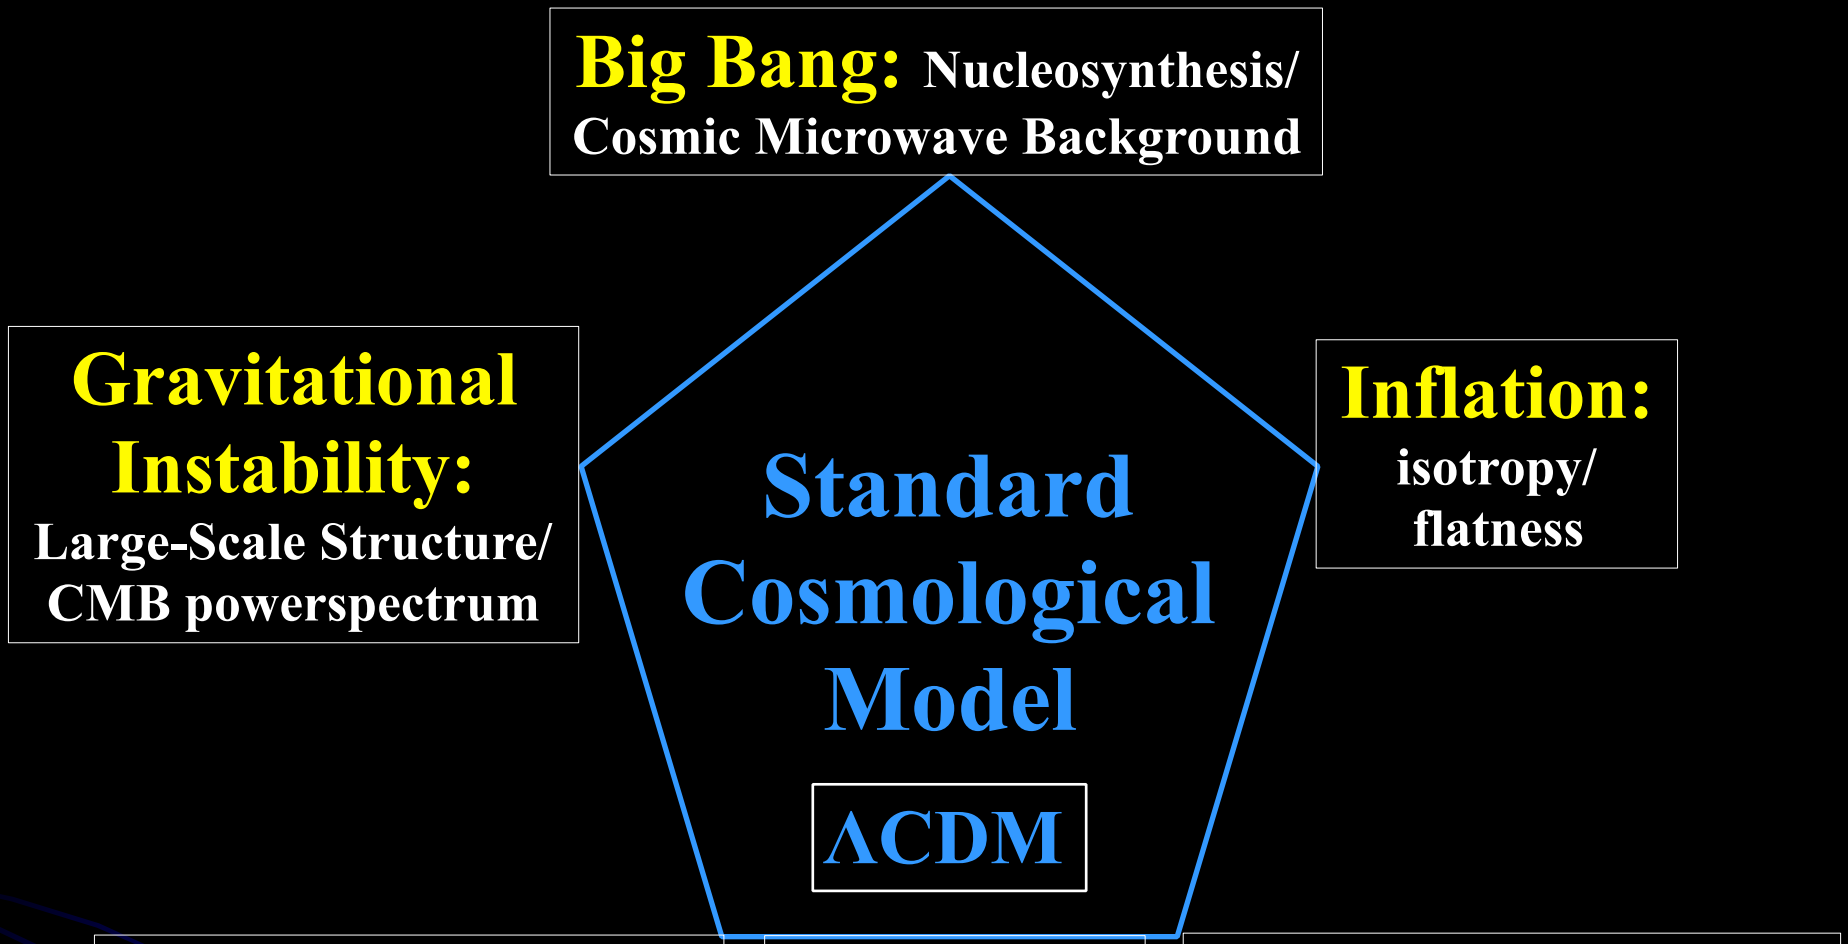
HectoMAP and Horizon Run 4: A Cosmological Test with Large-scale Structures at Intermediate Redshifts

Hwang, Ho Seong (KIAS)

Geller, Margaret J.; Park, Changbom; Fabricant, Daniel G.; Kurtz, Michael J.; Rines, Kenneth J.; Kim, Juhan; Diaferio, Antonaldo; Zahid, H. Jabran; Berlind, Perry; Calkins, Michael; Tokarz, Susan; Moran, Sean

November 1, 2016

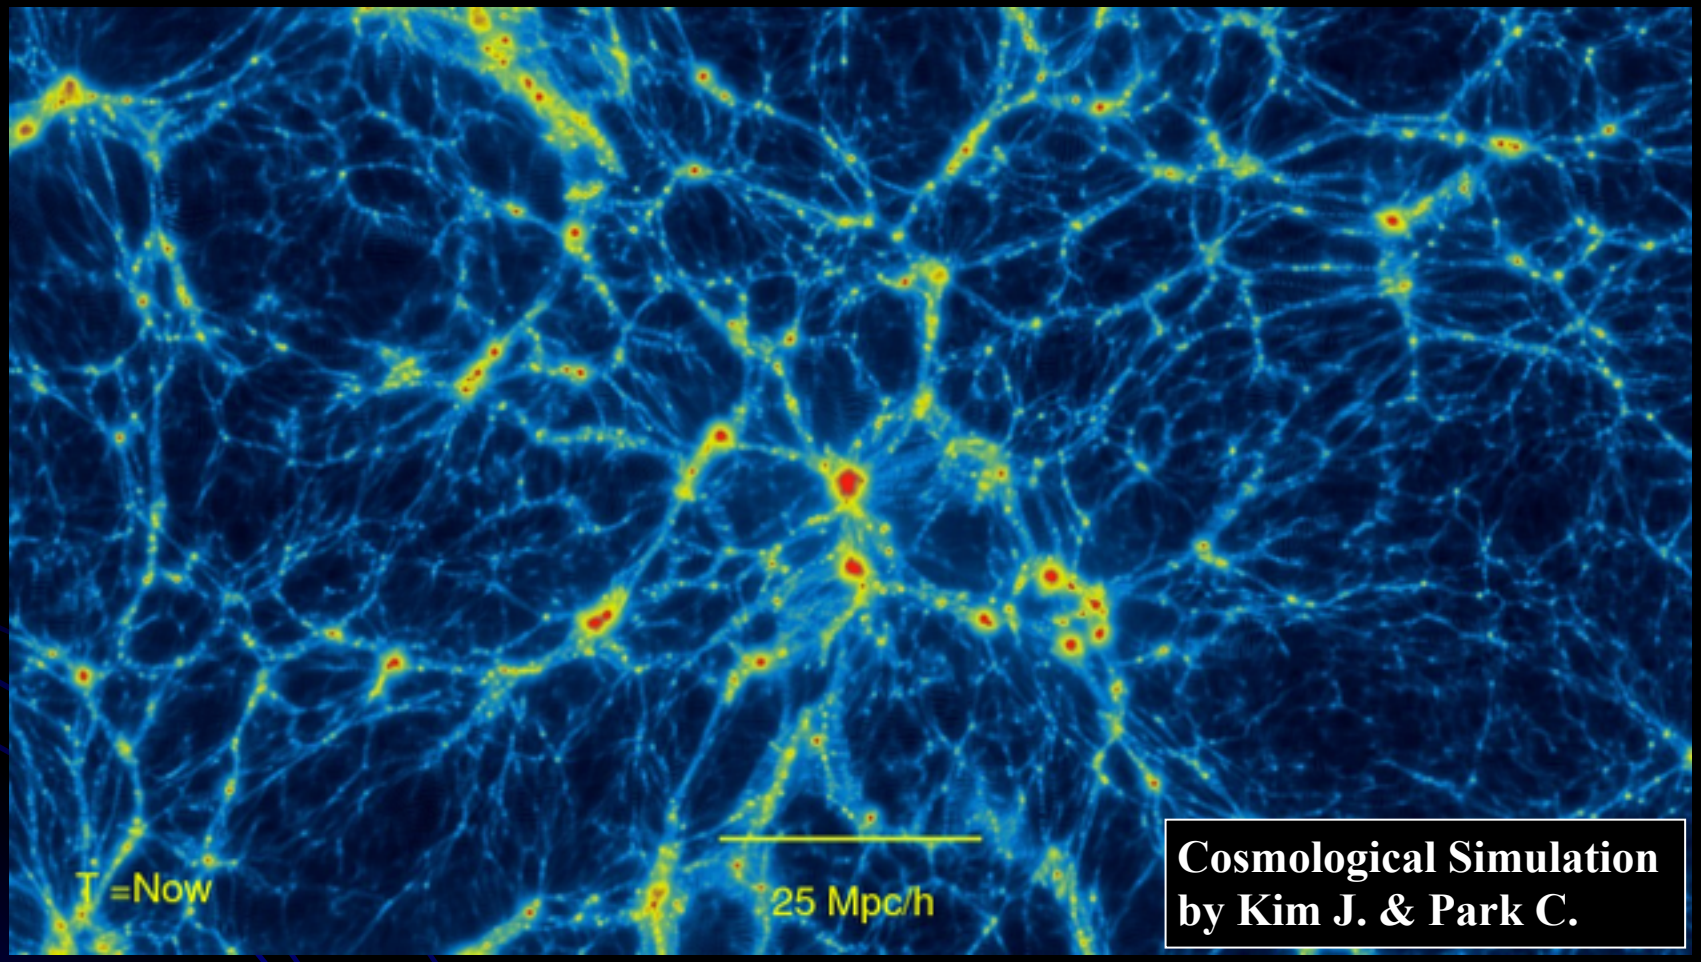
The 7th KIAS Workshop on Cosmology and Structure Formation



➢ 95% are dark : Test the Standard Cosmological Model
➢ with Large-scale Structure of the Universe

LSS: Any structure of galaxy distribution larger than galaxy clusters (>~10 Mpc)

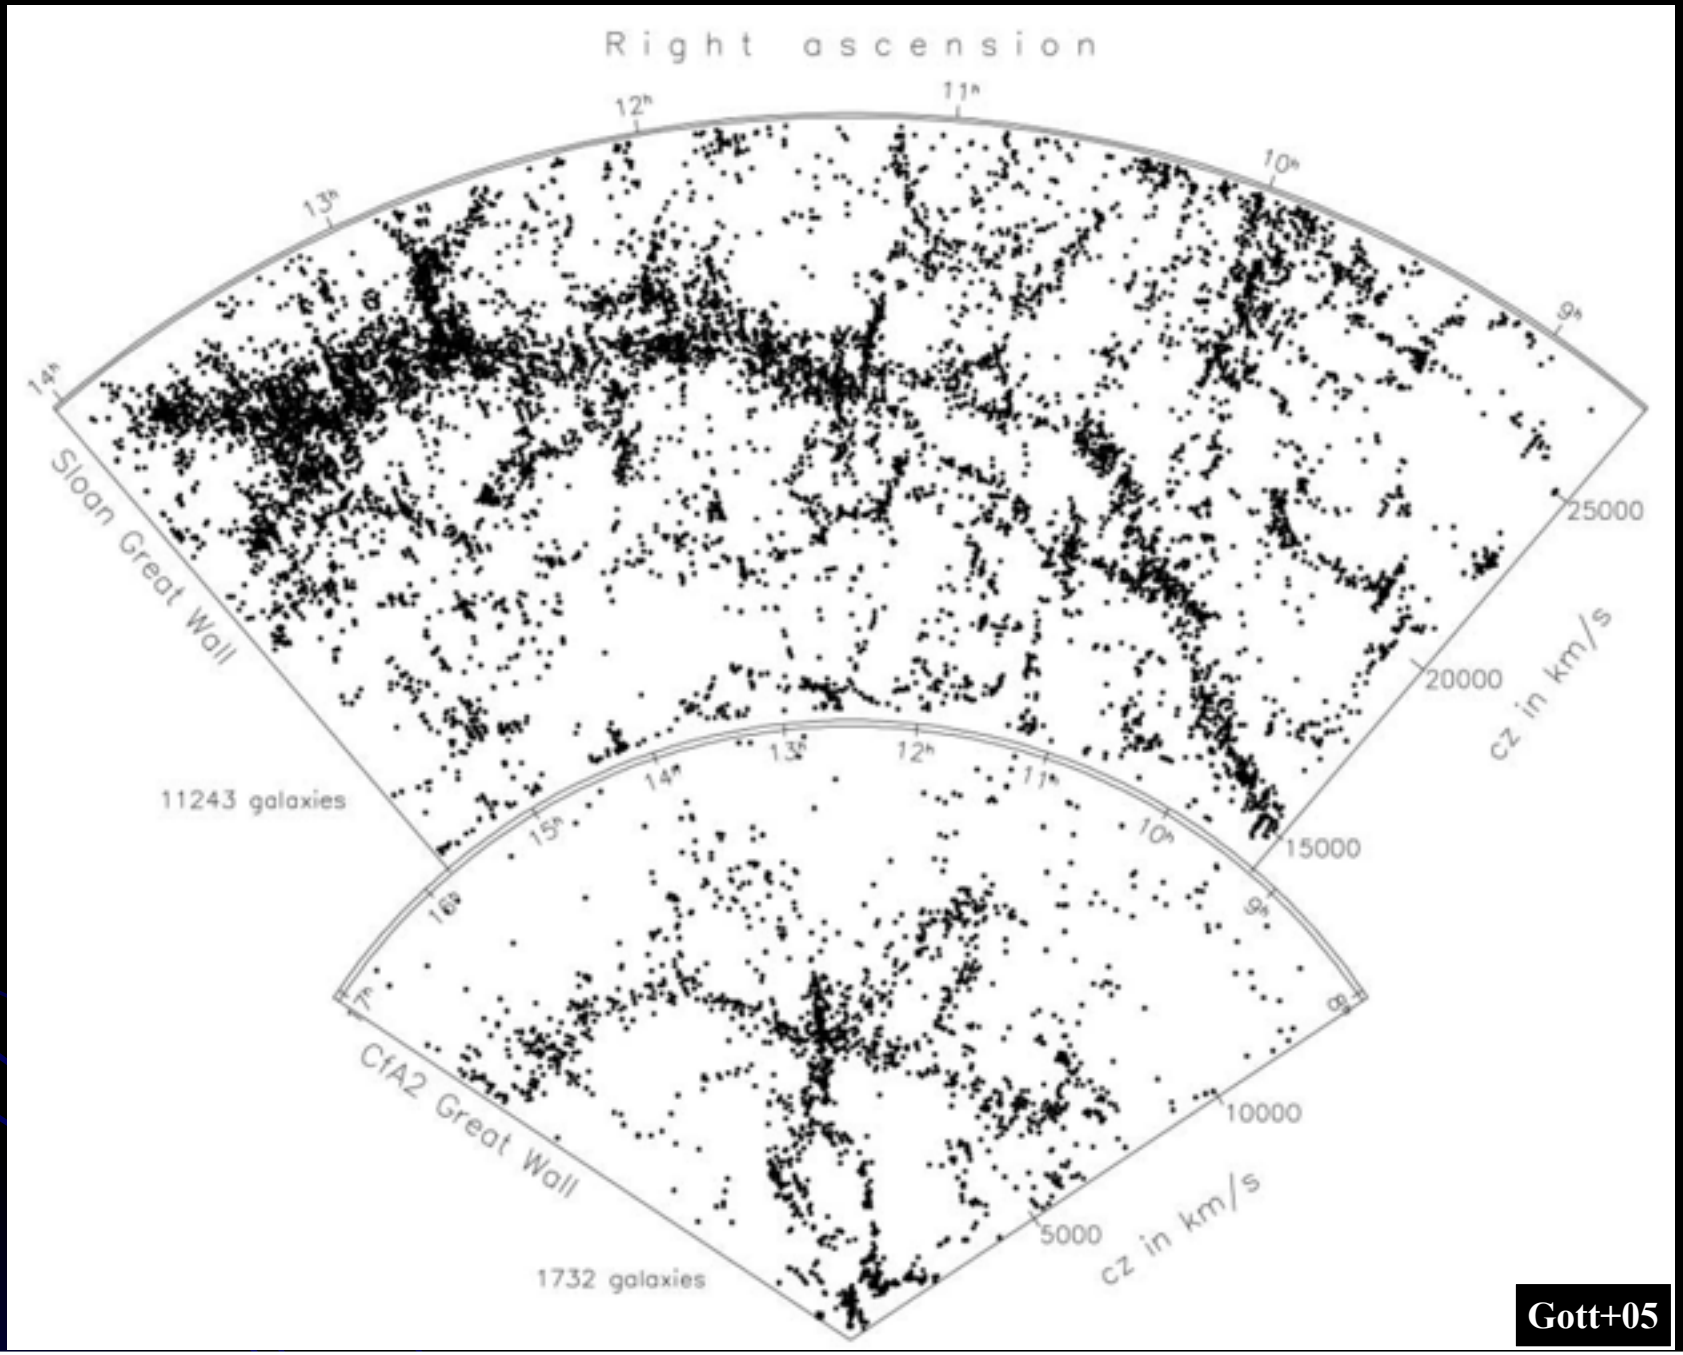
- Over-density Structure
  - Filament, Chain
  - Wall, Pancake, Sheet
- Under-density Structure
  - Tunnel
  - Void, Cell, Bubble



Cosmological Simulation
by Kim J. & Park C.

- Physical properties of large-scale structure depend on
  - cosmological parameters
  - physics of galaxy formation

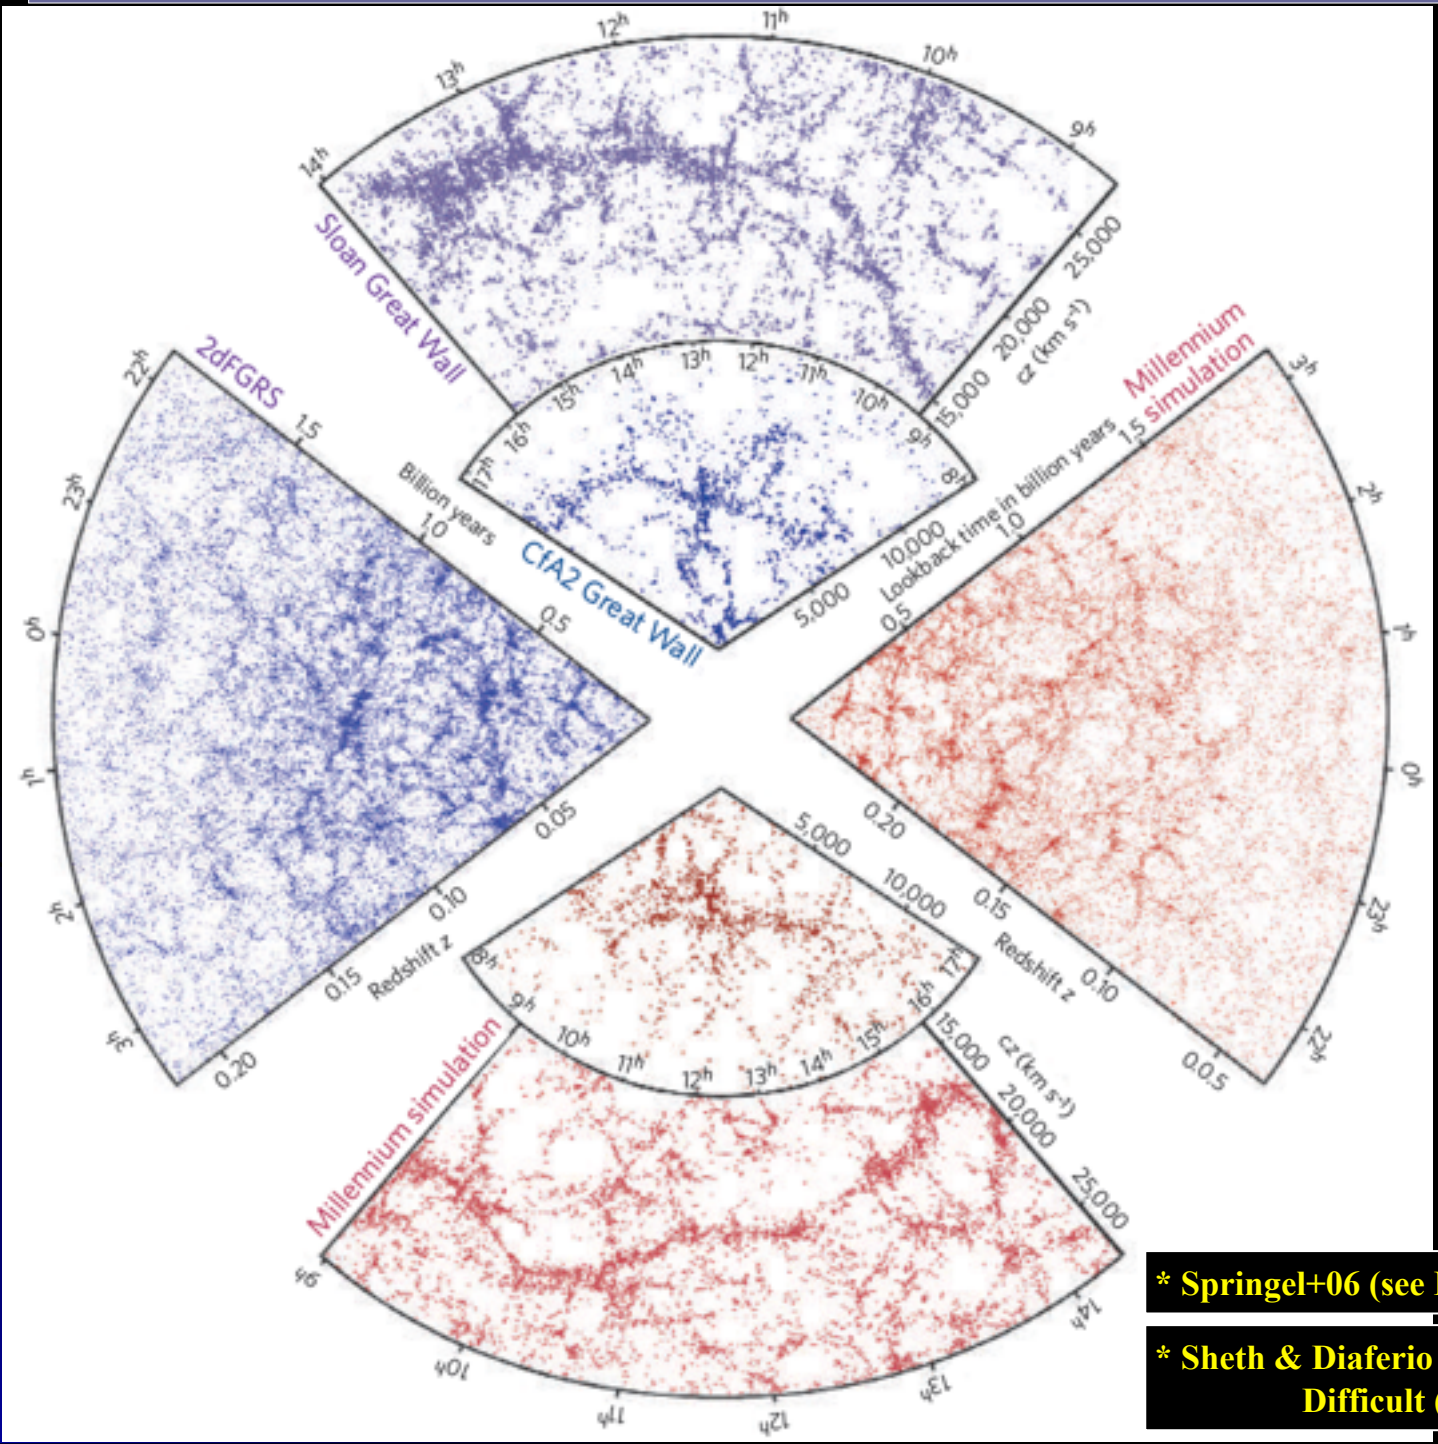
←Strong Constraints



Gott+05

Q: Do we expect this kinds of largest-scale structures in our standard ΛCDM cosmology?

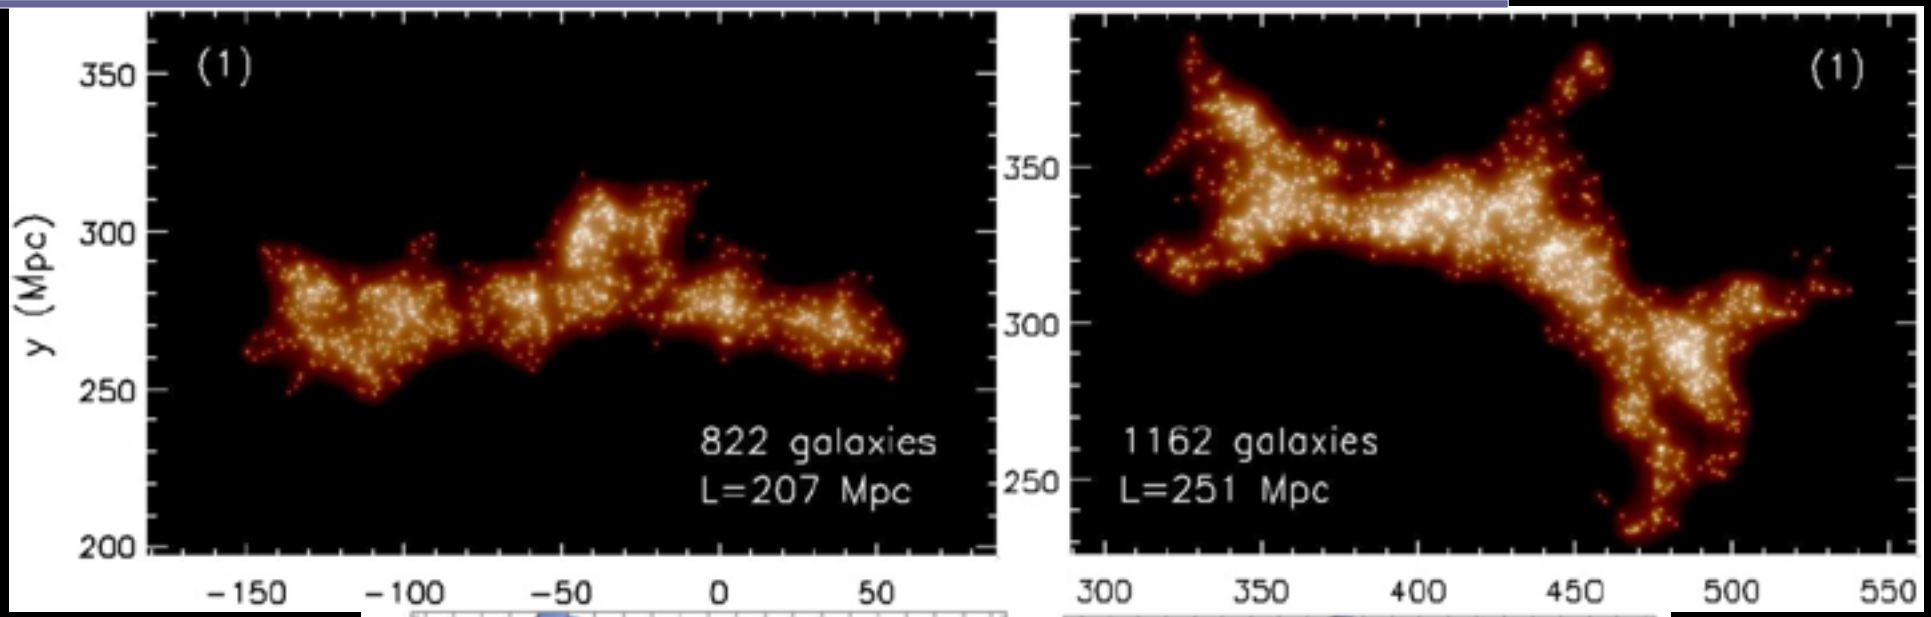
Largest Structures: Cosmological Tests

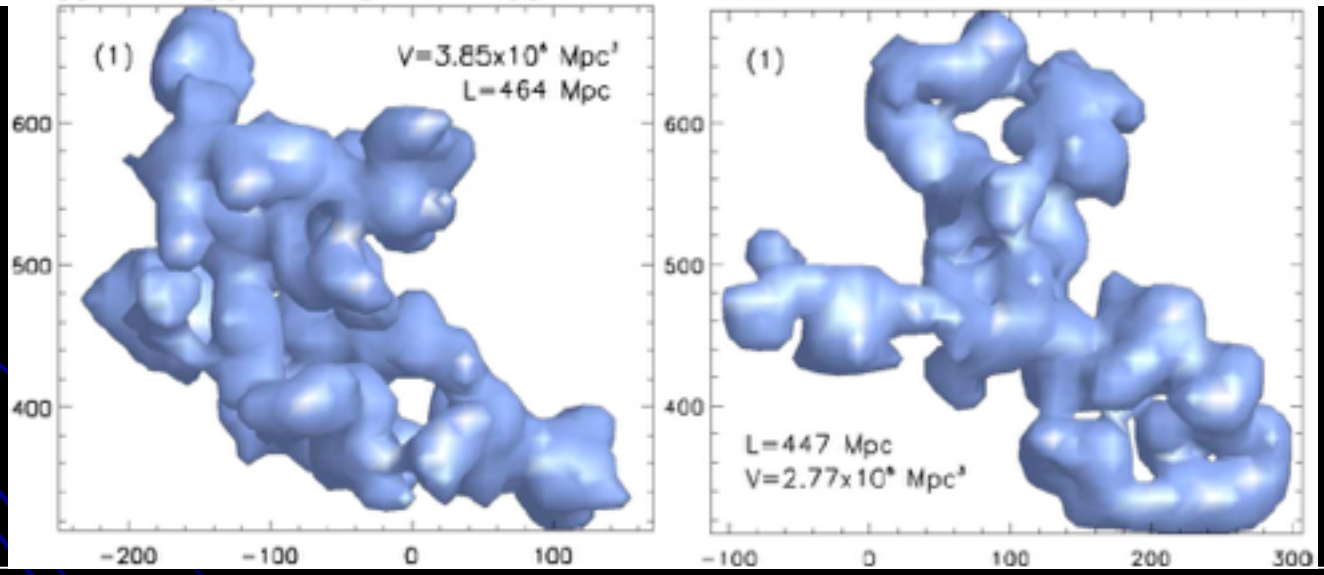


* Springel+06 (see Park+90;+12;+15): Ok.

* Sheth & Diaferio 11: The Sloan Great Wall is very unusual; Difficult (4 sigma) to reconcile with the ΛCDM model

SDSS vs. Horizon Run 2: Largest-scale Structures

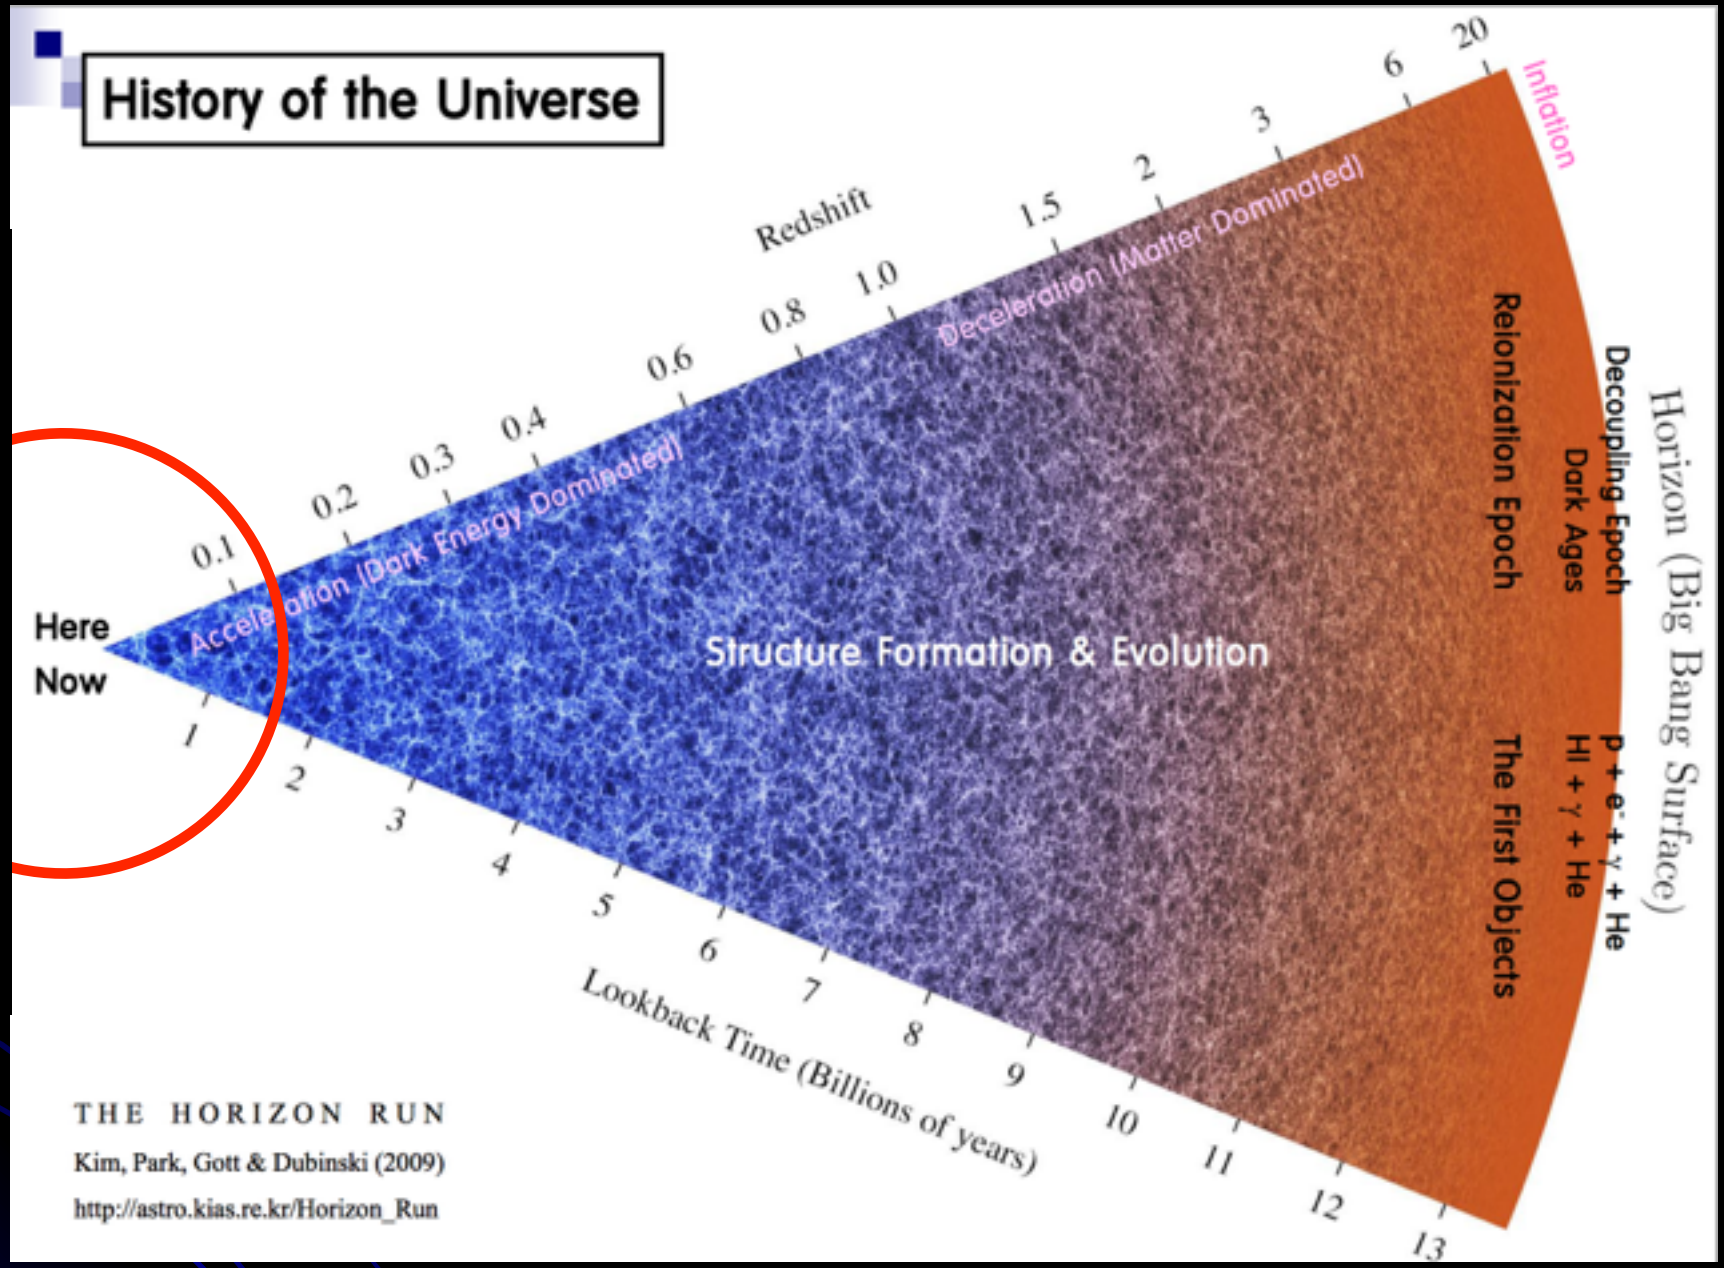




Park+12

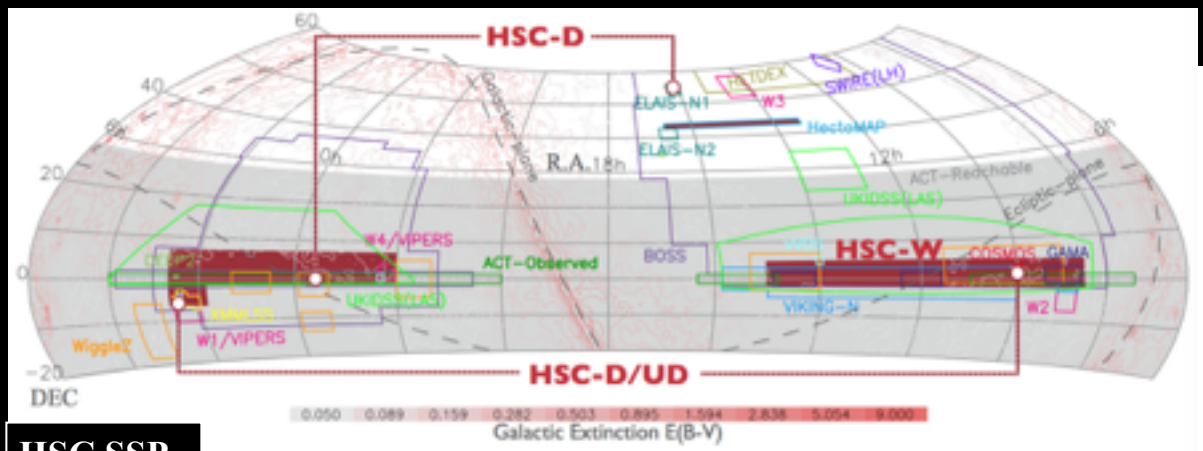
Q: Do we expect this kinds of largest-scale structures in our standard ΛCDM cosmology?

A: Yes, for nearby universe (~1.3 Gyrs ago, quantitative analysis in Park+12)

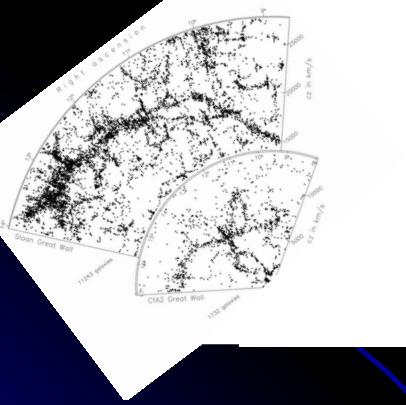


➢ **Only for nearby universe where structure formation is almost complete.**

➢ **To fully understand how structure forms in the universe,**
it is important to study the *evolution of large-scale structure,*
sensitive to dark matter and dark energy.



HSC SSP



HectoMAP (Geller, Hwang, Sohn+)

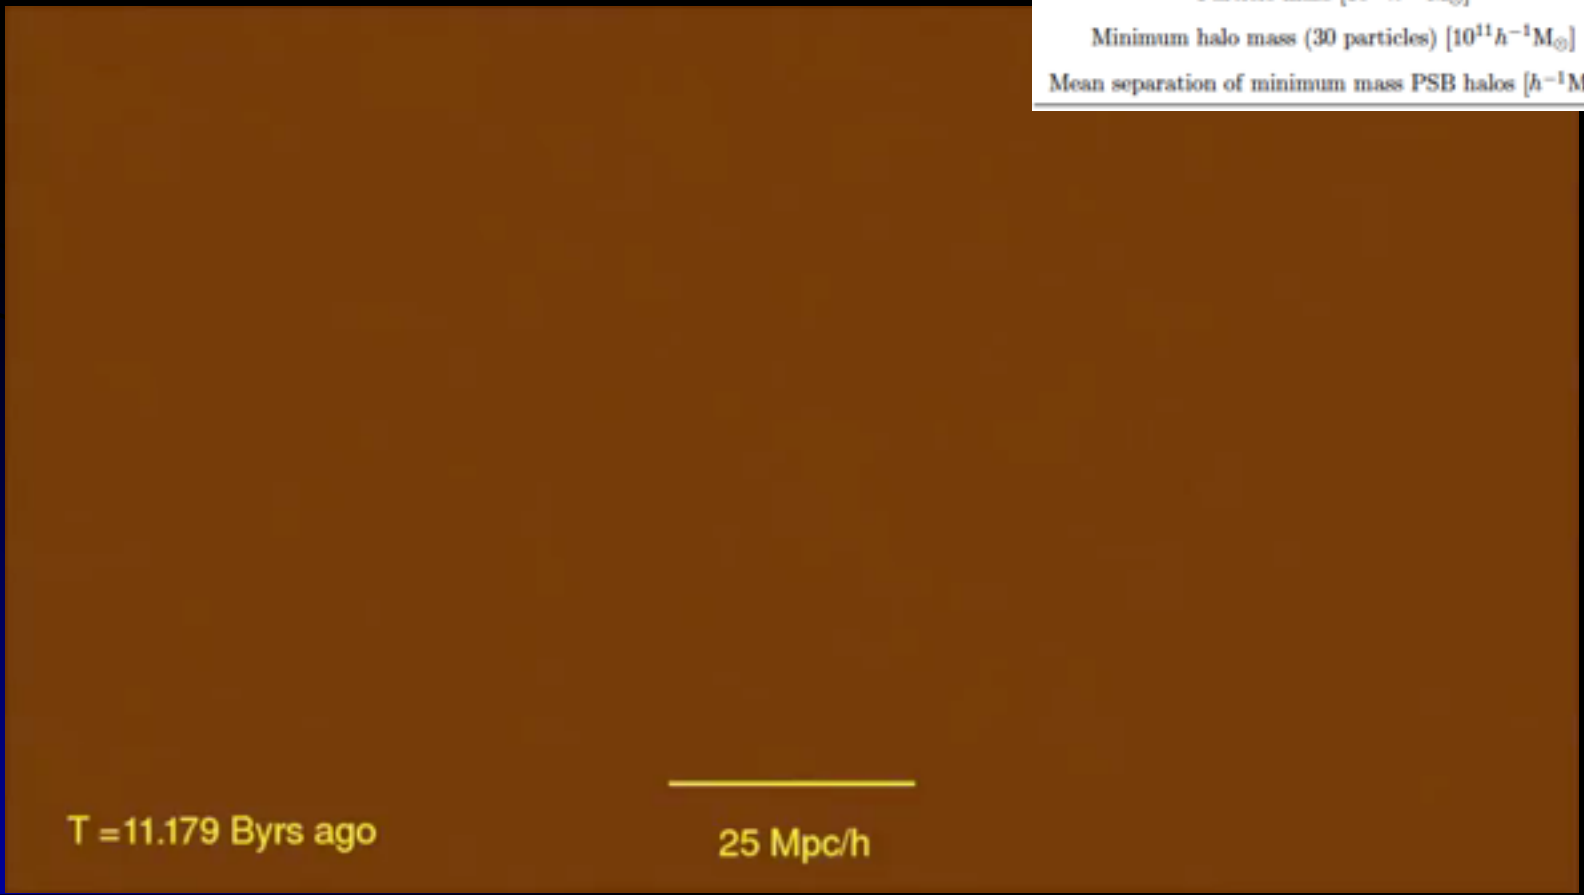
- One of densest and complete survey of red galaxies at r<21.3 (20.5)
  - HectoMAP: 600-1200 gals/deg^2, BOSS: ~150 gals/deg^2
  - Examine the Large-scale Structure at Intermediate Redshifts (Hwang+16, ApJ, 818, 173)

Horizon Runs @ KIAS

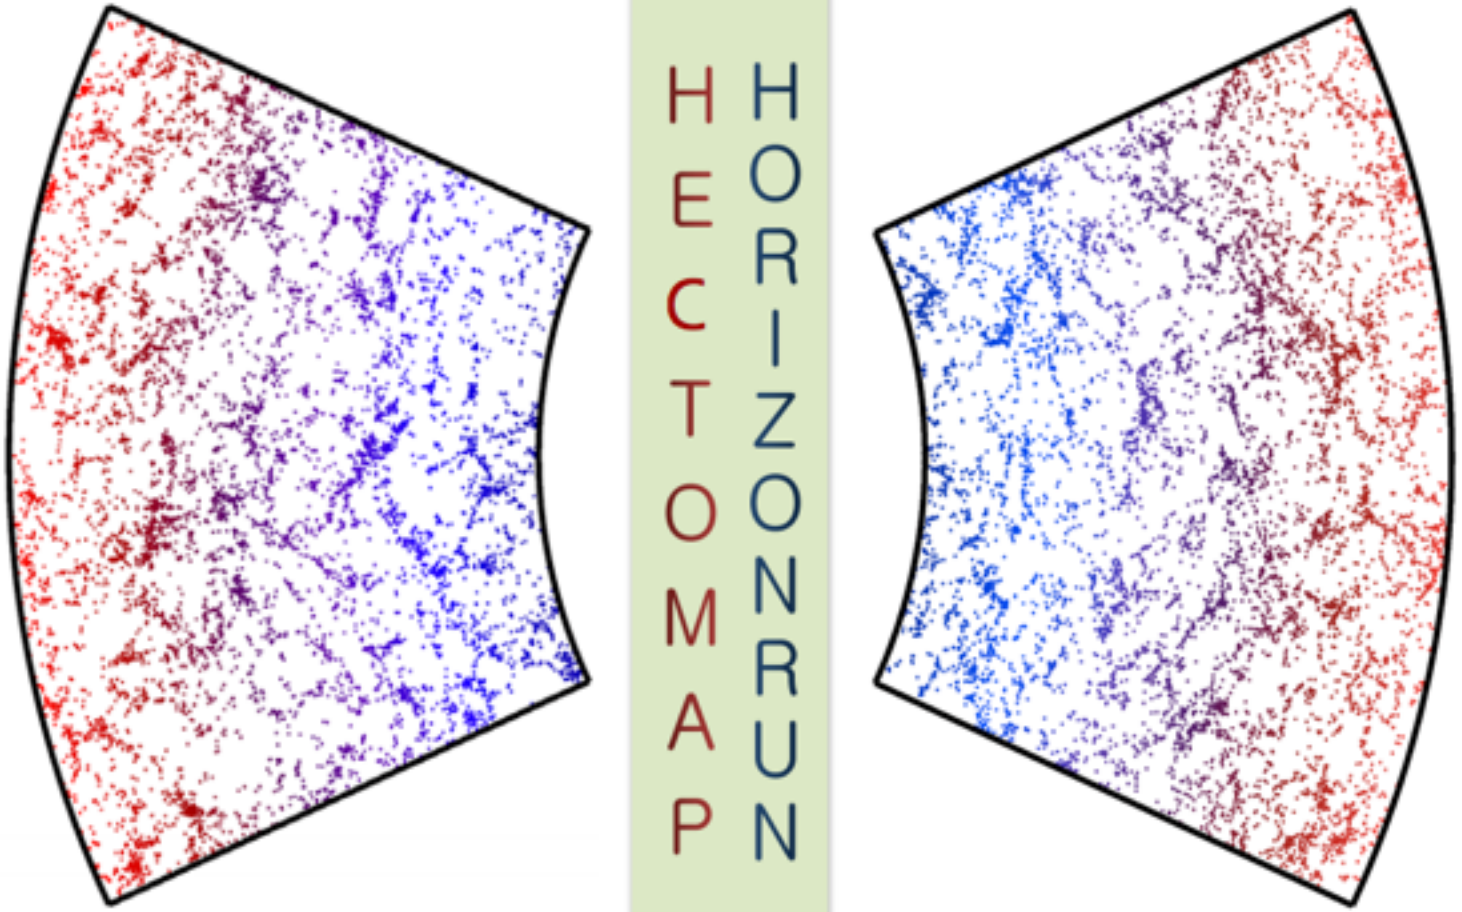
➢ **One of densest and largest cosmological simulations**

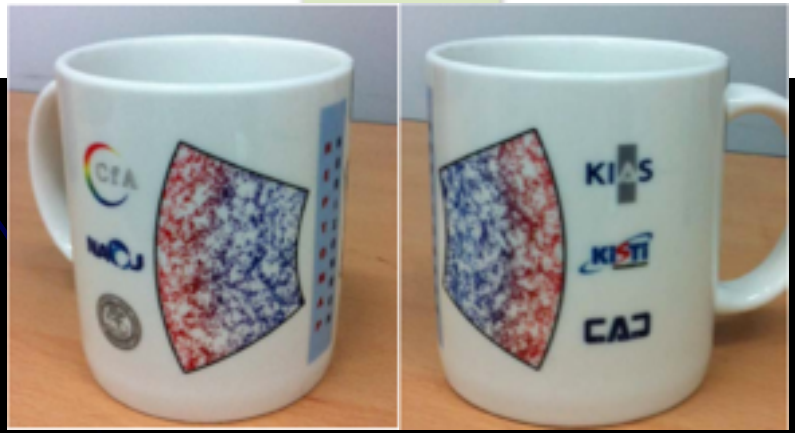
	HR1	HR2	HR3	HR4
Model	WMAP5	WMAP5	WMAP5	WMAP5
Ω_M	0.26	0.26	0.26	0.26
Ω_b	0.044	0.044	0.044	0.044
Ω_Λ	0.74	0.74	0.74	0.74
Spectral index	0.96	0.96	0.96	0.96
H_0 [100 km s^{-1}Mpc^{-1}]	72	72	72	72
σ_8	0.794	0.794	0.794	0.794
Box size [h^{-1}Mpc]	6592	7200	10815	3150
No. of grids for initial conditions	4120^3	6000^3	7210^3	6300^3
No. of CDM particles	4120^3	6000^3	7210^3	6300^3
Starting redshift	23	32	27	100
No. of global time steps	400	800	600	2000
Mean particle separation [h^{-1}Mpc]	1.6	1.2	1.5	0.5
Particle mass [$10^{11}h^{-1}M_\odot$]	2.96	1.25	2.44	0.0902
Minimum halo mass (30 particles) [$10^{11}h^{-1}M_\odot$]	88.8	37.5	73.2	2.706
Mean separation of minimum mass PSB halos [h^{-1}Mpc]	13.08	9.01	11.97	4.08

Kim J., Park C. +15



Large-scale Structures in the HectoMAP and Horizon Runs



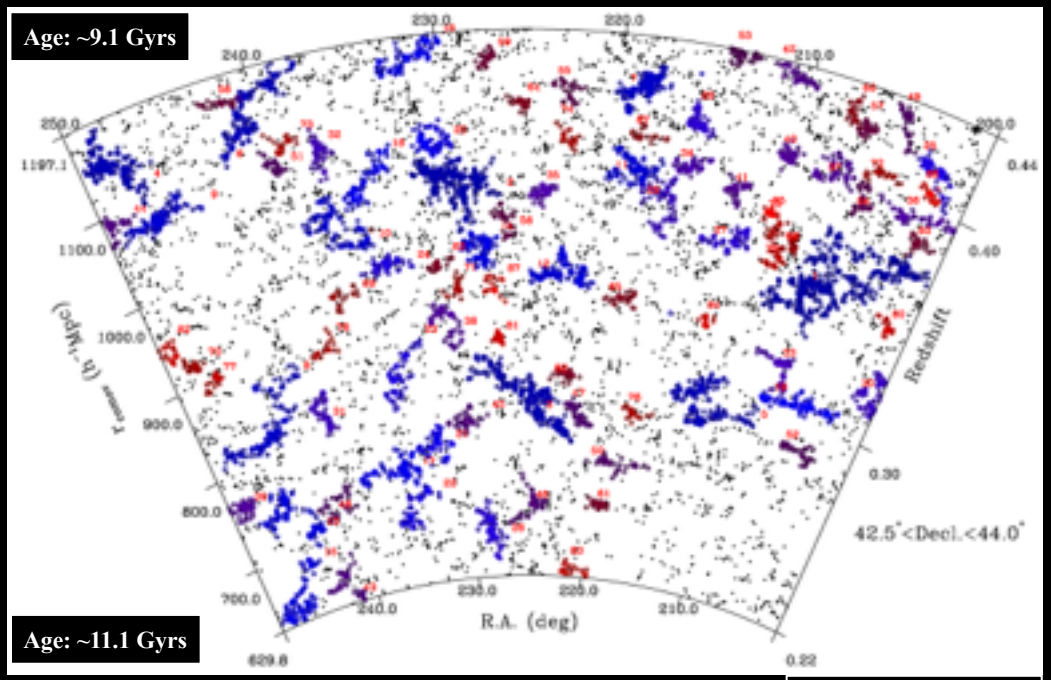


In this Talk,

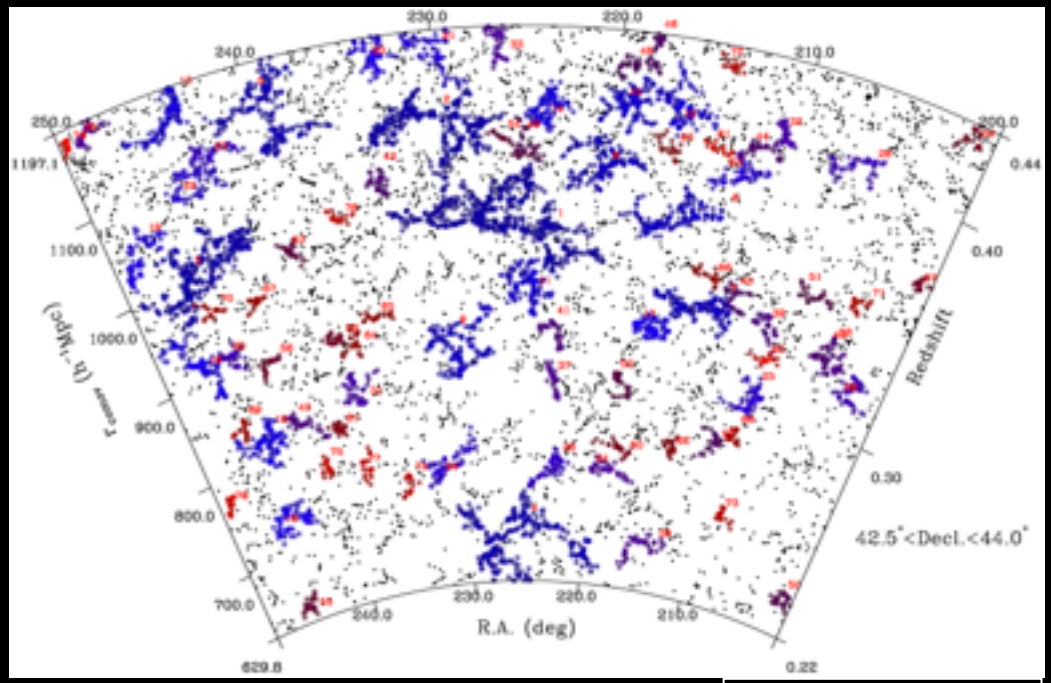
By applying the same criteria to the observations and simulations to identify over- and under-dense large-scale features of the galaxy distribution,

- **1) Compare the Physical Properties of over- and under-dense large scale-structures in HectoMAP and Horizon Run 4, and**
- **2) Examine the Probability to find observed largest structures in the simulation.**

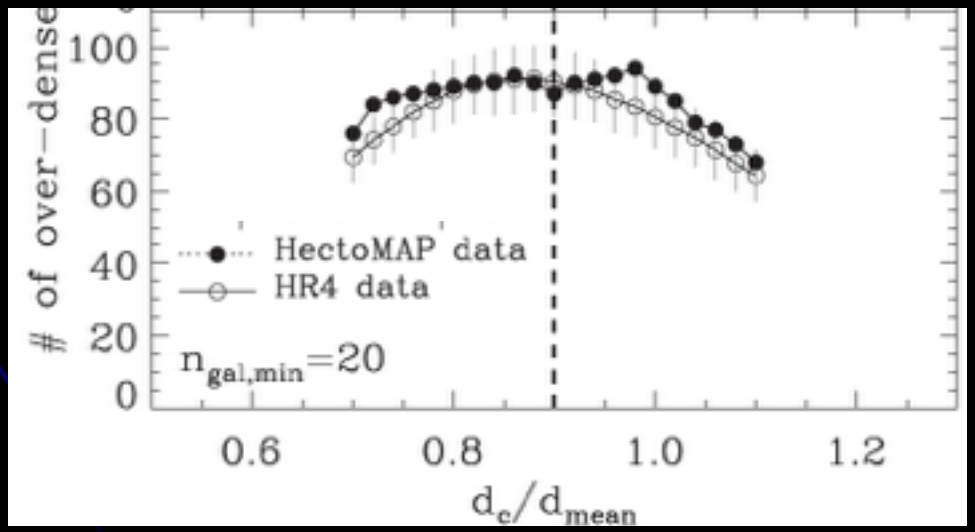
Identification of Over-dense Large-scale Structure



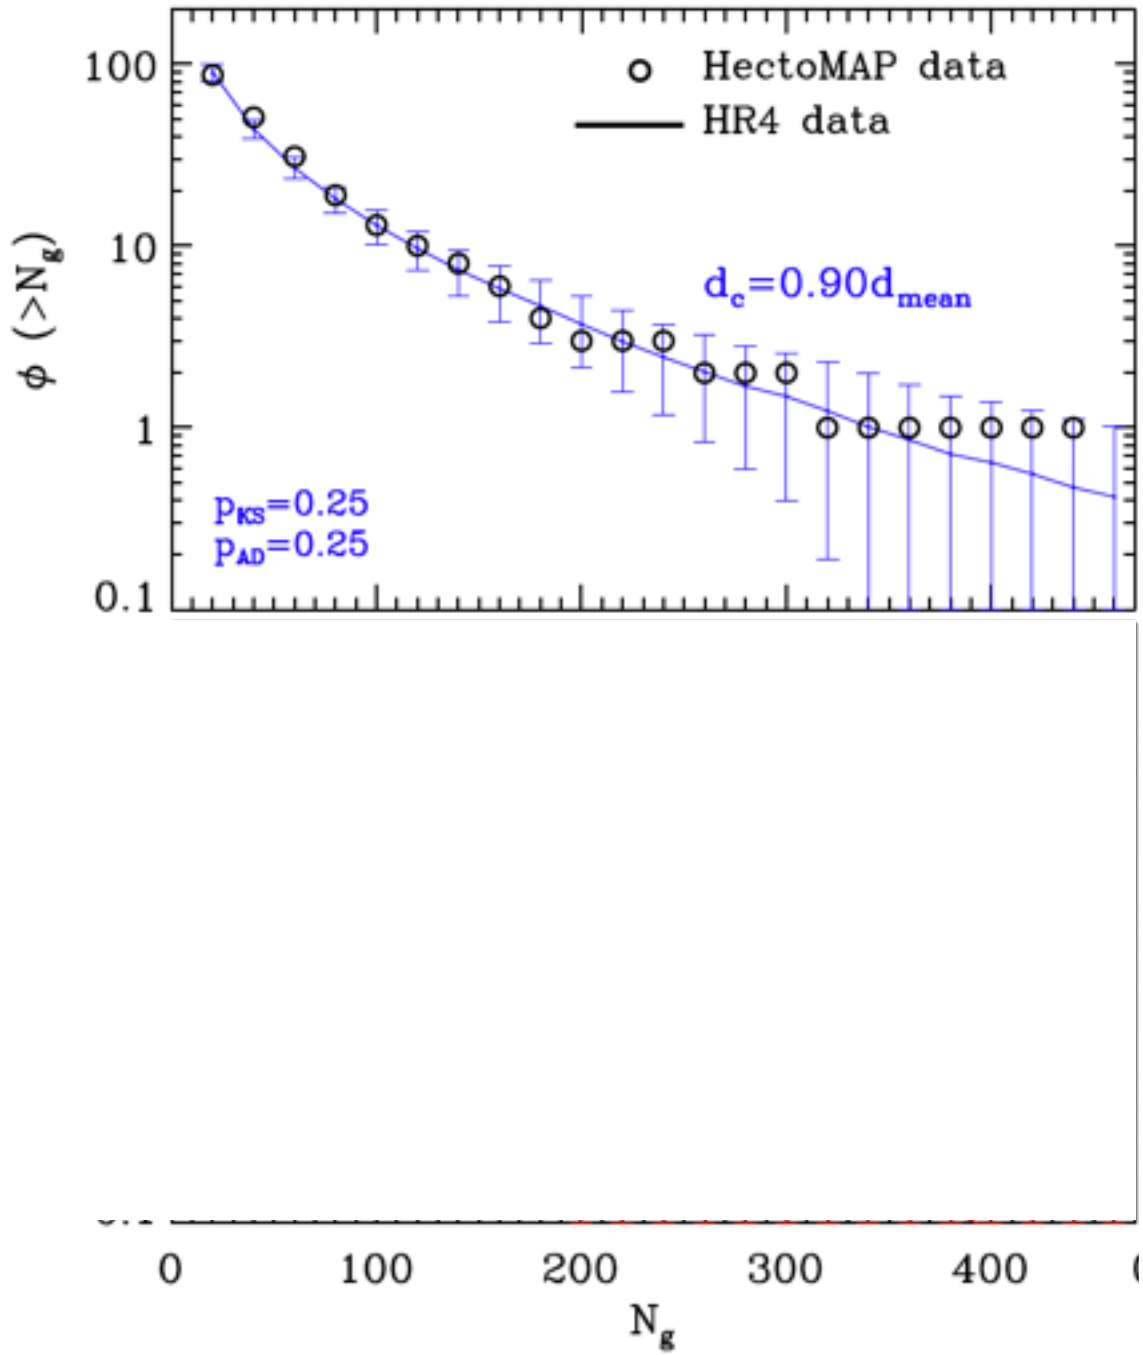
HectoMAP



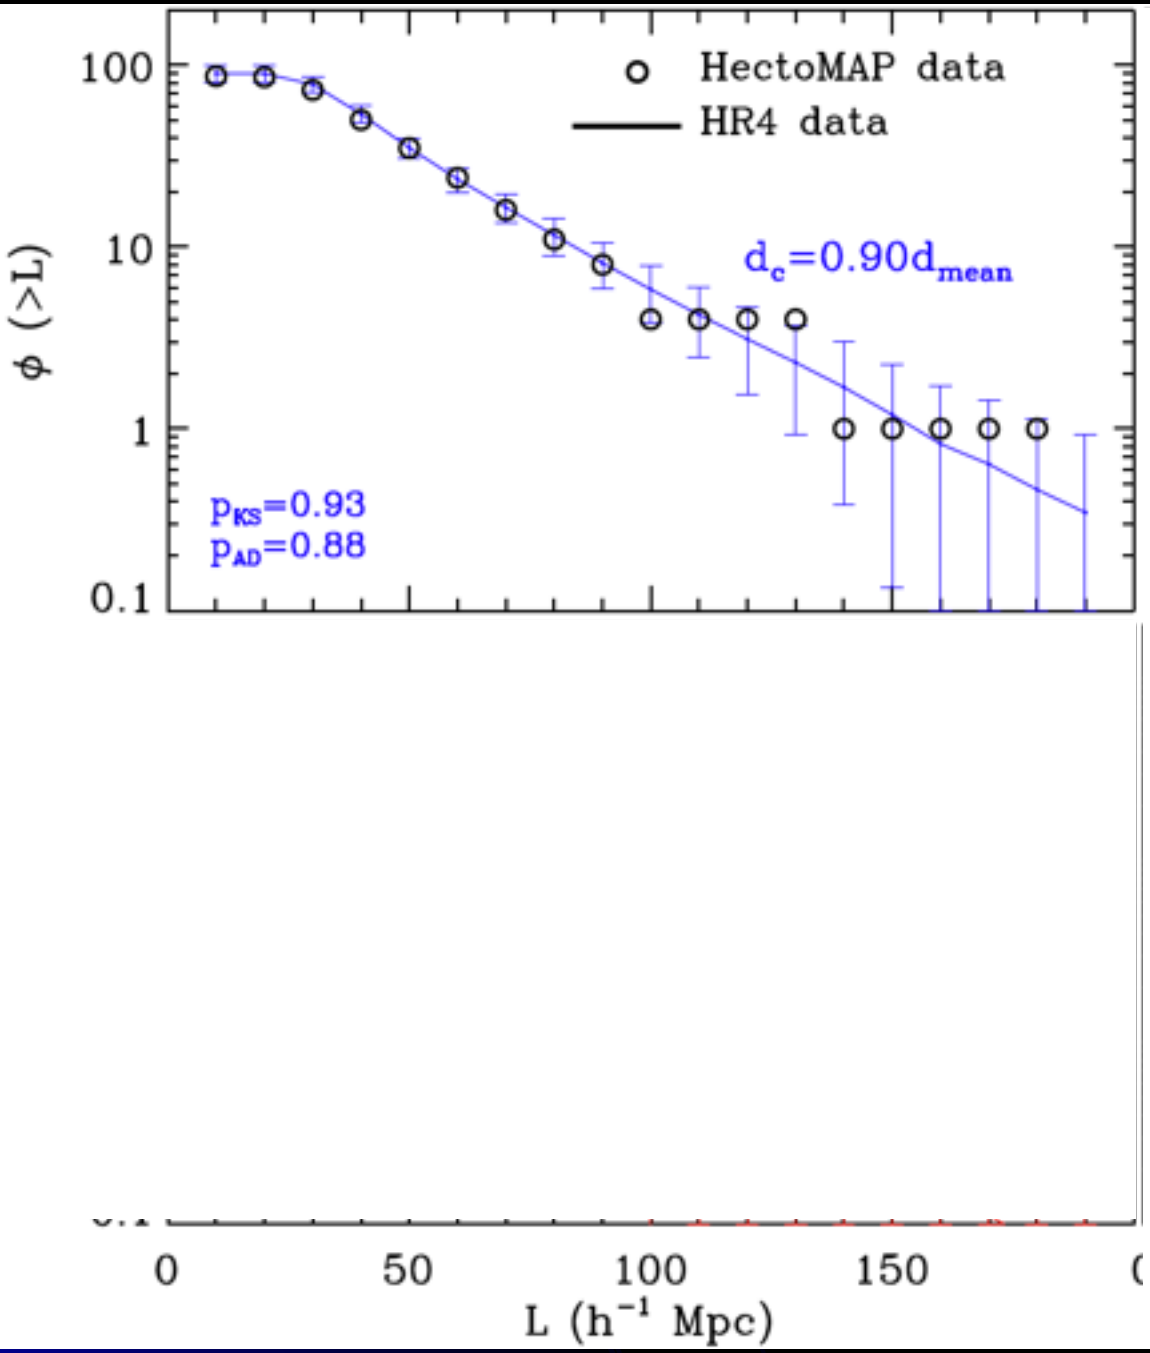
Horizon Run4



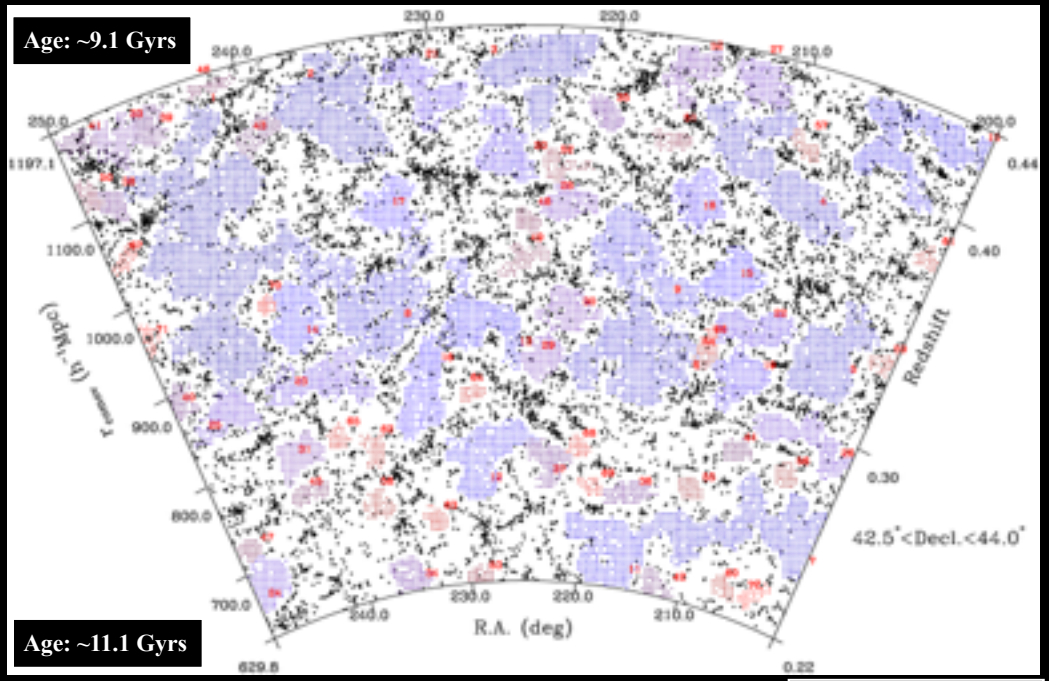
Richness Distribution of Over-dense LSS



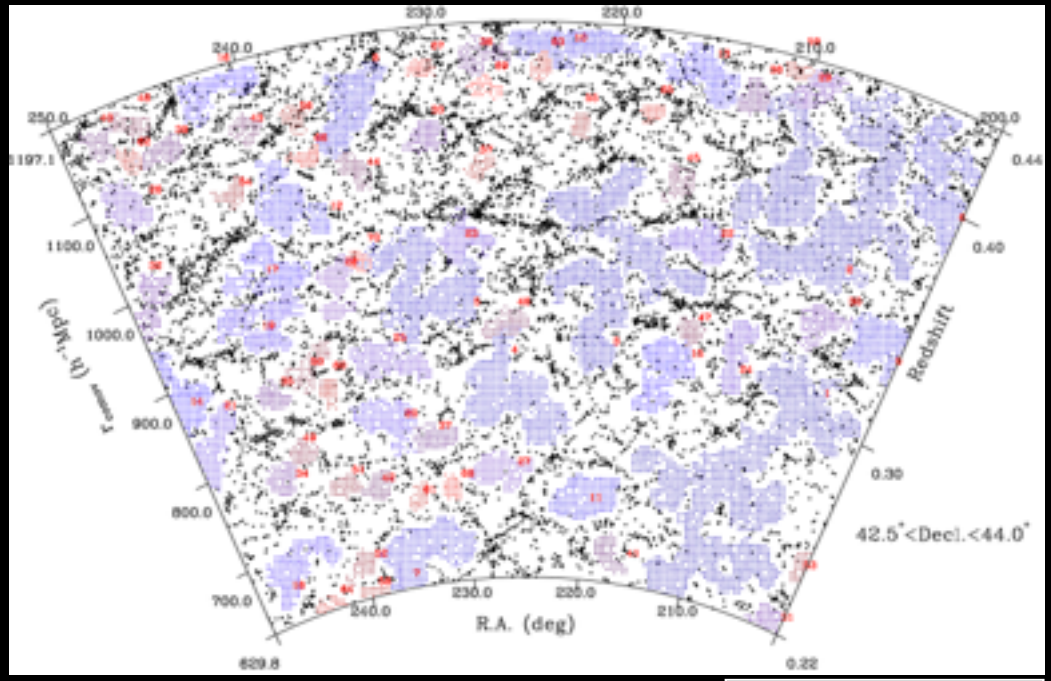
Size Distribution of Over-dense LSS



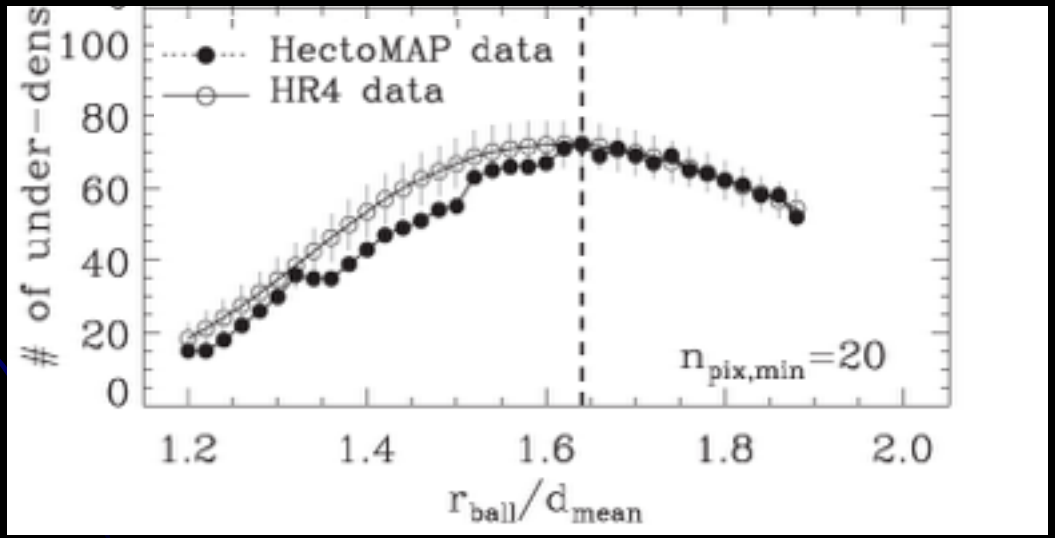
Identification of Under-dense LSS (Voids)



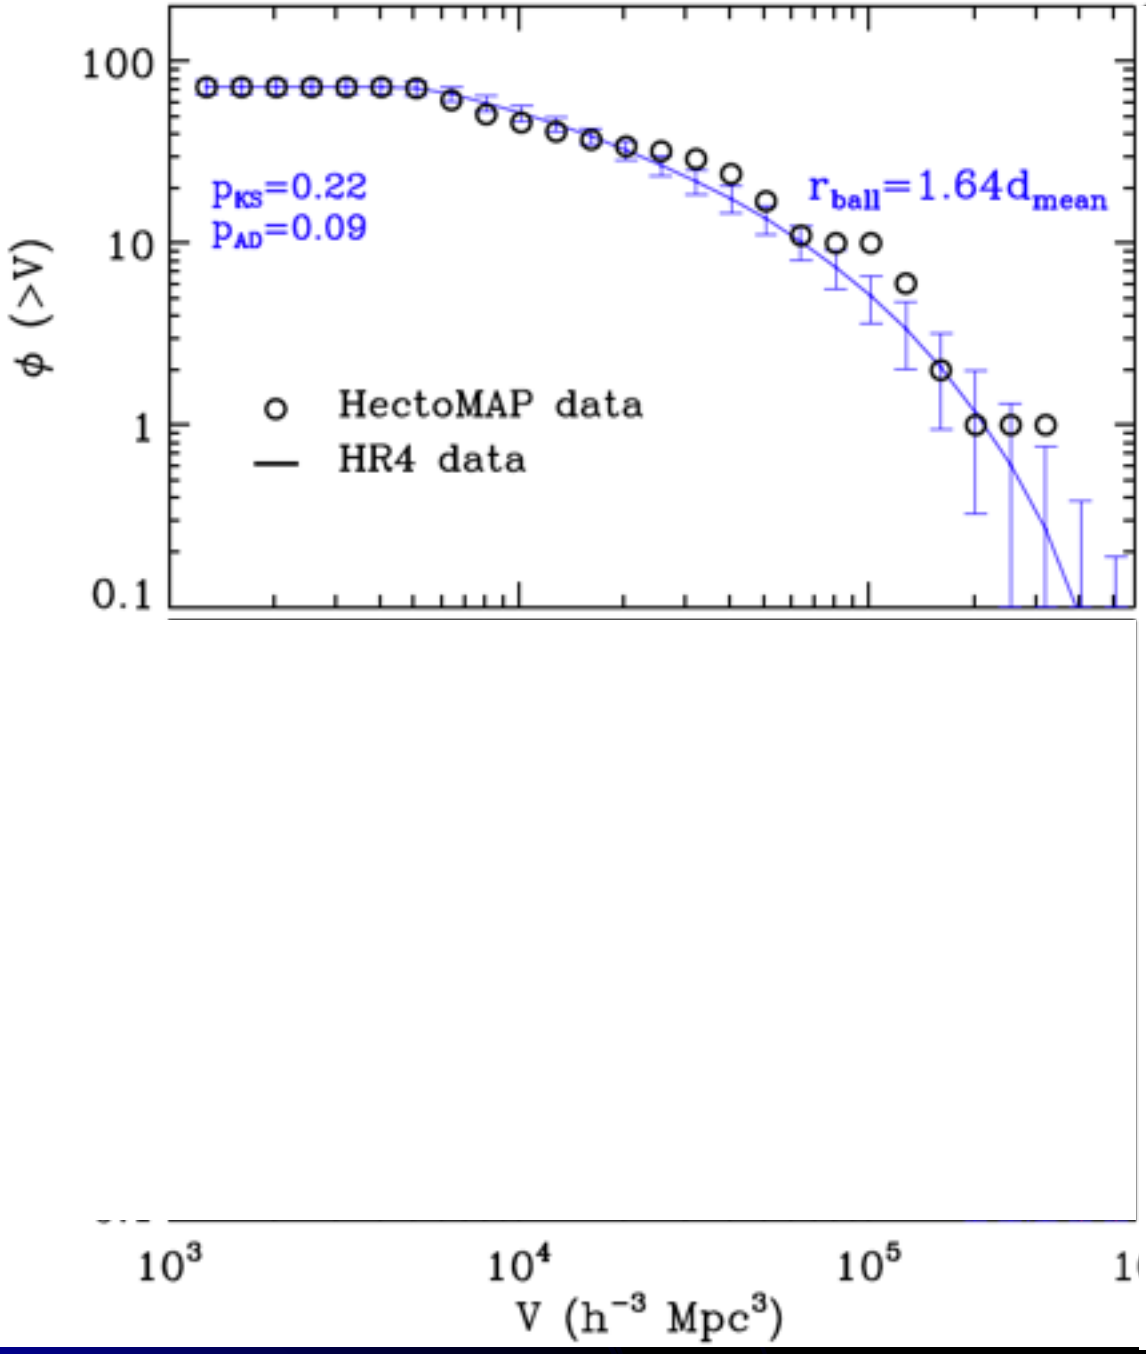
HectoMAP



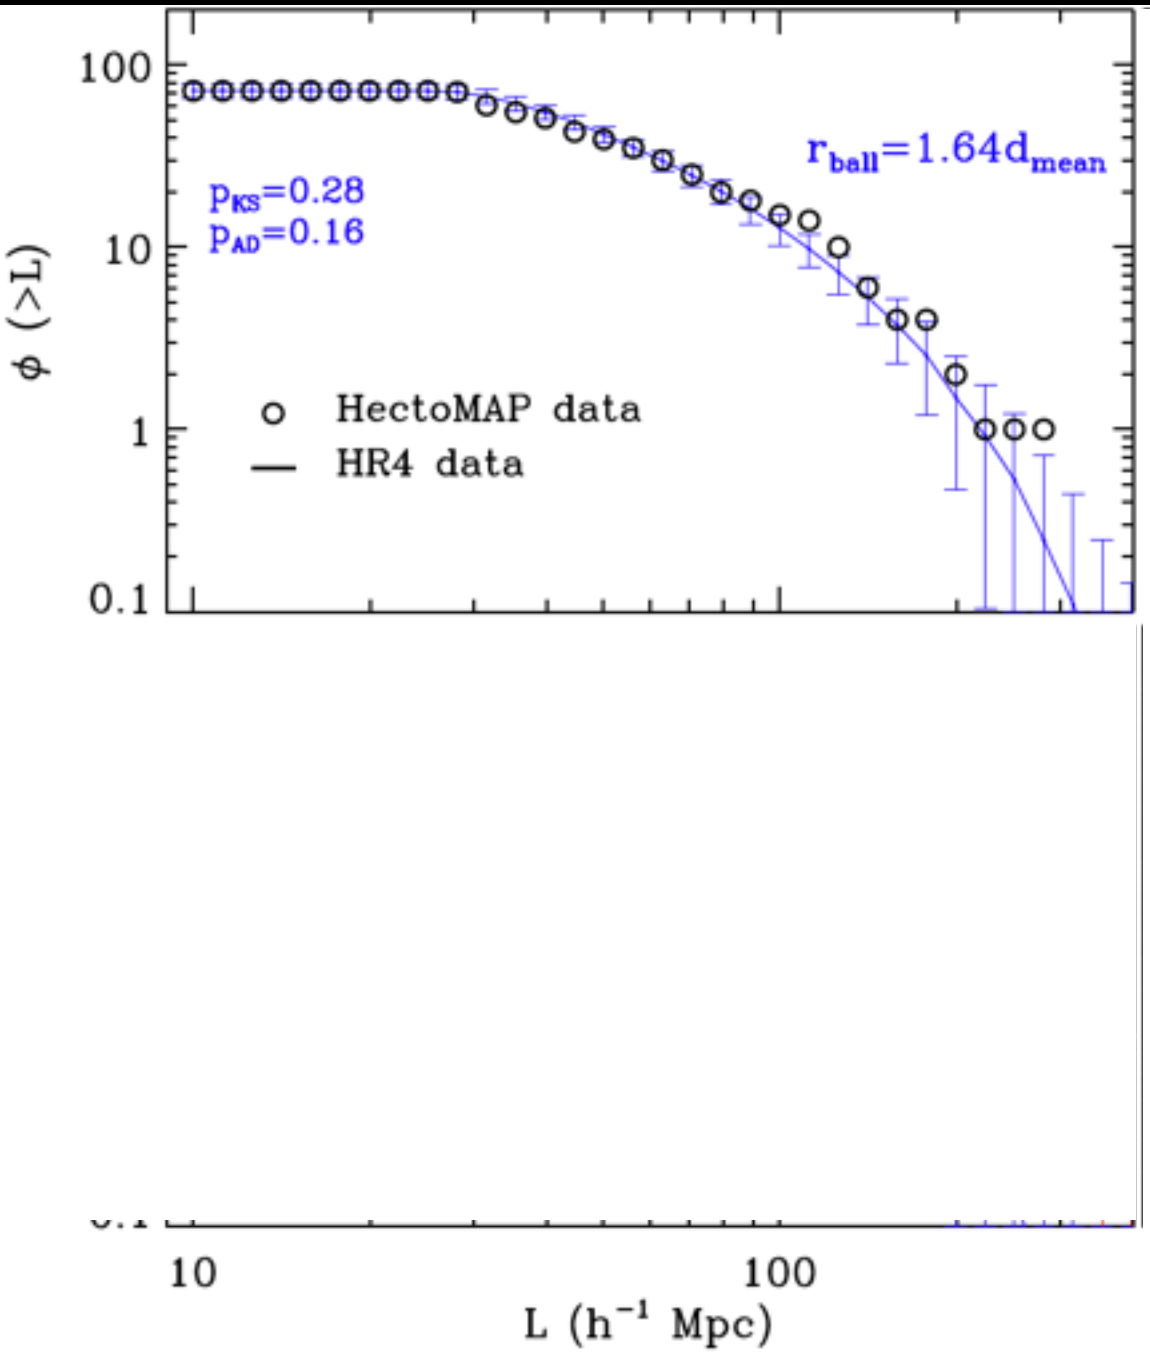
Horizon Run4



Volume Distribution of Voids



Size Distribution of Voids

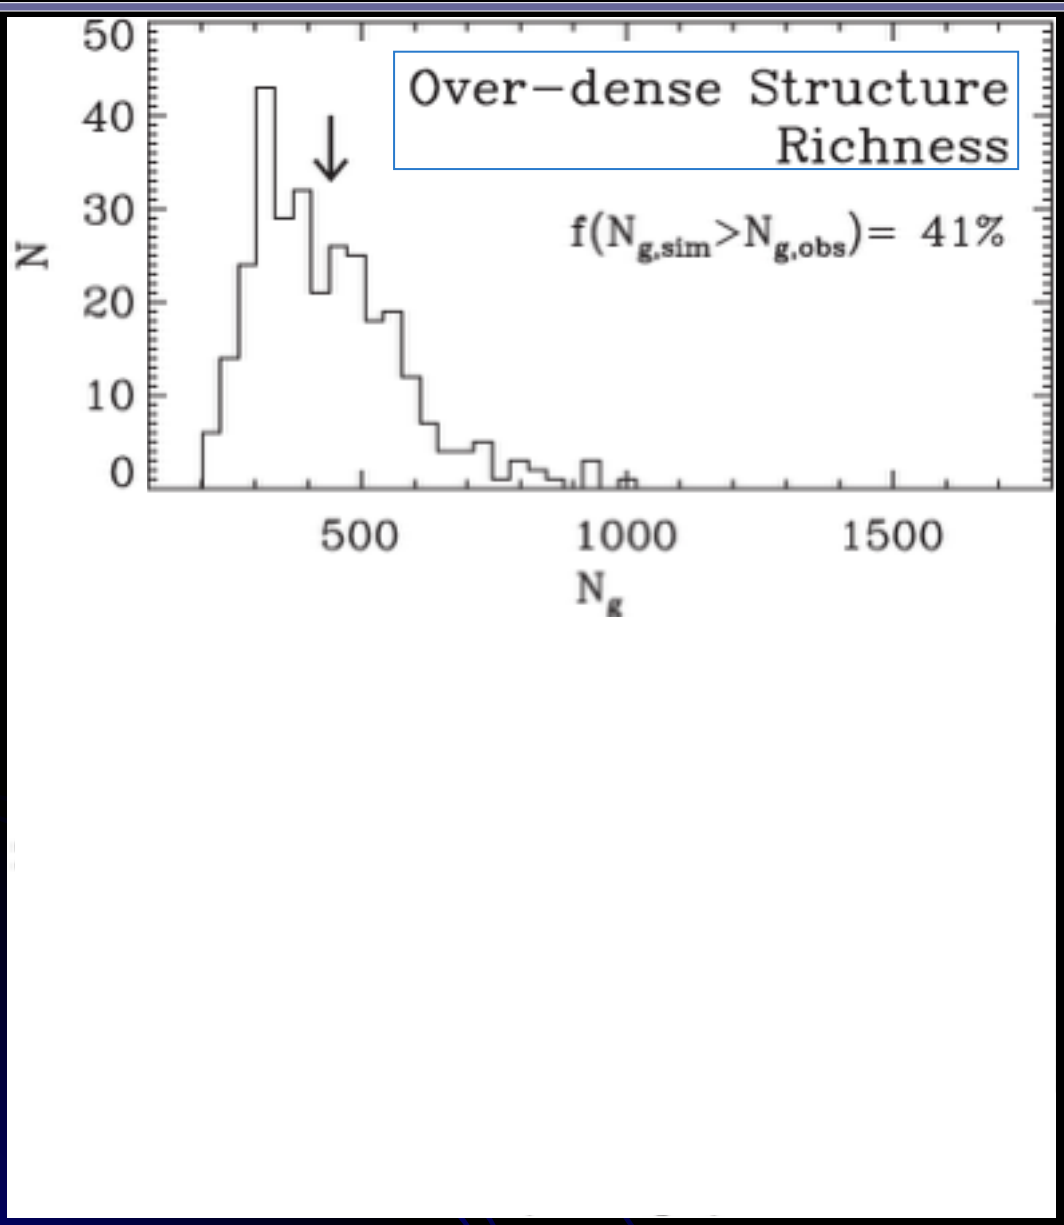


In this Talk,

➢ **1) Compare the Physical Properties of over- and under-dense large scale-structures in HectoMAP and Horizon Run 4, and**

➢ **The physical properties of observed large-scale structures at intermediate redshifts ($0.22<z<0.44$) are remarkably consistent with predictions of the standard ΛCDM model.**

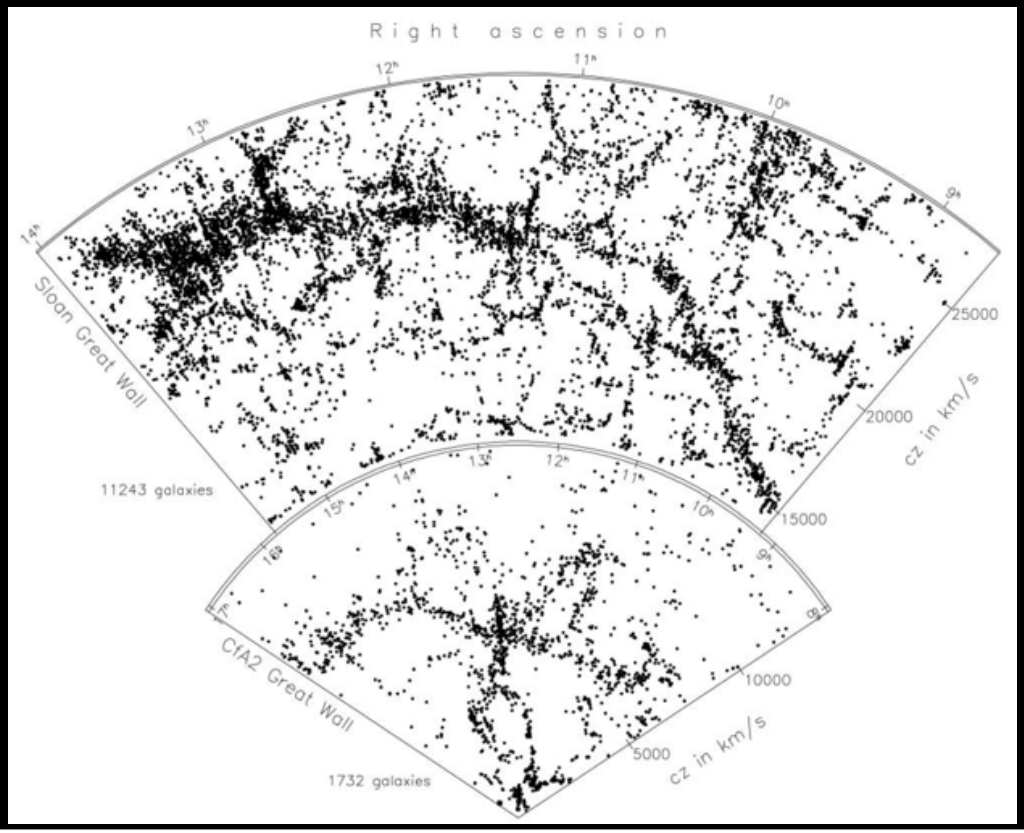
2) Largest Structures: HectoMAP vs. 300 Horizon Run 4 mock surveys



In this Talk,

➢ **2) Examine the Probability to find observed largest structures in the simulation.**

➢ **The properties of the largest over- and under-dense structures in HectoMAP are well within the distributions for the largest structures drawn from 300 Horizon Run 4 mock surveys.**



Gott+05

Q: Do we expect this kinds of largest-scale structures in our standard ΛCDM cosmology?

- **Yes, at 0.22<z<0.44. We would like to emphasize that**
  - **Many mock surveys for a robust test**
  - **The same criteria in identifying large-scale structures in the observations and simulations**
  - **Comparable samples of galaxies and halos with the matched number densities**

Summary

- **Statistics for Largest-Scale Structure (over- and under-density structures)**
  - **ΛCDM model is still consistent with observations at 0.22<z<0.44 (~9-11 Gyrs old)**
