Title: Search for $B^{*+} \rightarrow l^{*+} X$ with Hadronic Tagging Method at Belle Experiment

We measure the upper limit of Branching Fraction of $B^{*+} \rightarrow l^{*+} X$ that is leptonic decay of B meson where X is not in the Standard Model.

We have preliminary result which is obtained from 771fb^{-1} data sample collected at the $Y(4S)$ resonance.

They are selected and analyzed through hadronic tagging method for obtaining high purity due to effective background suppression.
