

[P15] Analysis of Renting books in a University Library

Tae Ho Lee, Inha university

We analyzed some features of pattern of users in a library from year 2004 to 2015. We calculate the renting frequency of the book per month or per year. We estimated the distribution of the renting frequency, the distribution of the holding time, and the distribution of overdue days. We observed a power law and exponential distribution of the distribution.
